Education

Indian Institute of Information Technology Design and Manufacturing

2022 – 2026

Bachelor of Technology in Computer Science Major in Artificial Intelligence

Chennai, India

Experience

Neblify Innovations Pvt. Ltd.

Jun 2025 – Dec 2025

Mobile App Developer Intern

Remote

- Architected and delivered a production-ready cross-platform mobile application using **React Native** and **Expo**, implementing scalable UI architecture, Context-based state management, optimistic updates, and undo workflows.
- Designed and integrated a secure backend using **Go (Encore)** and MongoDB, building authenticated **REST APIs** for task and project management with Firebase Authentication and OAuth (Google/Facebook).
- Integrated an AI-powered **chatbot** assistant for conversational task management using LLM inference, and prepared the app for Android testing by configuring build pipelines, OAuth credentials, and Google Play Console requirements.

Naksh Jewels

Jul 2025 – Oct 2025

Full Stack Developer Intern

Remote

- Built and maintained a production-grade e-commerce backend using **Node.js**, **Express**, **TypeScript**, and **MongoDB**, supporting complex product catalogs, variants, carts, orders, and customizable jewelry workflows.
- Designed normalized MongoDB schemas and integrated **Strapi CMS** to manage categories, collections, banners, and SEO content, enabling scalable data modeling and non-technical content management.
- Implemented secure **REST APIs** with **JWT-based authentication and role-based access control**, documented via Swagger/OpenAPI, optimized media delivery using **Cloudflare and ImageKit CDN**, and deployed services on a VPS using **Coolify** with production security best practices.

Projects

EtherVault3 – Ethereum CLI Wallet | *TypeScript, , ethers.js*

🌐 [Source Code](#)

- Built a secure Ethereum HD CLI wallet with AES-256 encryption, multi-account support, mnemonic import/export, transaction history, and airdrop automation using TypeScript & ethers.js.
- Architected wallet security with PBKDF2 key derivation, encrypted storage, and memory-only key handling.
- Enabled real-time balance queries, native ETH transfers, gas optimization, and multi-network support (Mainnet, Sepolia, Goerli).

0x01 Markets – Decentralized Prediction Market Platform | *Solidity, Foundry, TypeScript, Next.js*

🌐 [Live Site](#)

- Built and deployed a decentralized prediction market protocol on Ethereum **Sepolia** with 9 interconnected Solidity smart contracts supporting binary outcome markets, non-custodial fund management, and **95%+ automated test coverage**.
- Implemented core market mechanics using an **LMSR-based AMM** with off-chain quote signing and on-chain verification, alongside an optimistic oracle resolution system with bonded dispute handling and gas-efficient lazy finalization.
- Developed a full-stack Web3 dApp using React and Next.js with Wagmi wallet integration, backed by a PostgreSQL + Prisma indexing backend; deployed to production with security safeguards including **ReentrancyGuard** & **replay-attack** protection.

Speed Run Ethereum (SRE)

SRE Portfolio

- Completed all Speed Run Ethereum challenges, building Solidity-based dApps including **ERC-20/721** tokenization, **Chainlink VRF** randomness, AMM-style **DEX**, over-collateralized lending/borrowing, **staking**, **stablecoins**, and prediction markets - demonstrating strong DeFi and smart-contract engineering fundamentals.

Avatar NFT Minter | *Solidity, TypeScript, Viem/Wagmi*

🌐 [Live Site](#)

- Developed a full-stack Web3 NFT minting dApp enabling users to mint unique on-chain **ERC-721** avatar NFTs, implementing Solidity smart contracts using OpenZeppelin standards and deploying on the Ethereum Sepolia testnet.
- Built a Next.js + TypeScript frontend with viem/wagmi and RainbowKit wallet integration, leveraging **IPFS** (via Pinata) for decentralized NFT metadata storage.

- Built a reorg-safe Ethereum event indexer in Rust for **ERC-20 Transfer** logs with modular **RPC, decoder, ingestion, storage, and GraphQL API** layers, supporting checkpoint-based historical backfill and near-tip live indexing.
- Implemented industry-style blockchain data correctness features including **confirmation-depth handling, hot/cold storage architecture, block-hash revalidation**, automated rollback on chain reorganization, and atomic **transaction-per-range** commits to eliminate partial-write crash windows.
- Designed a partitioned PostgreSQL storage engine with batched inserts, indexed block metadata tracking, parallel **backfill/live/hybrid** modes, and GraphQL query support for indexed transfer data and indexer status over both finalized and hot near-real-time data.

Technical Skills

Programming Languages: Solidity, TypeScript, Rust, Go

Blockchain & Web3: Ethereum, Smart Contracts, ERC-20, ERC-721, ERC-4337(Account Abstraction), DeFi, Chainlink Oracles, OpenZeppelin Contracts

Frontend Technologies: React, Next.js, React Native, Tailwind CSS

Backend Technologies: Node.js, Express.js, WebSocket(Socket.io)

Databases: MongoDB, MySQL, PostgreSQL, Prisma ORM

Developer Tools & Frameworks: Foundry, Hardhat, Git, GitHub, VS Code

Operating Systems: Linux, Windows

Leadership / Extracurricular

NCC Cadet (2022–2025): Demonstrated discipline, leadership, and teamwork through structured military-style training, drills, and coordinated group activities.

Esports Club (2023–2025): Served as Coordinator and Head Core, leading event planning and execution, managing coordinators, and overseeing student participation across competitive esports activities.
